EYE-
CATCHING
& HIGH
PERFORMING

KAPTIV®

A synergy combining safety, stability and style in a single solution.

- Many colour combinations
- Dynamic, sporty look
- The ORIGINAL anti-fatigue shoe
- Multipurpose: from running to trekking

i-daptive® is a revolutionary technology patented by Base Protection and is central to the new KAPTIV® line.

A smart system that understands your activity and adjusts instantly.

Comfort mode

Shock-absorbing soles guarantee anti-fatigue by cushioning your feet and returning energy with each step.

Dynamic mode

The moment your feet touch the ground, the shoe adapts to the ever-changing conditions.

Off Road mode

When traversing rugged terrain, reduce the risk of trauma and sprains with this stability control system which keeps your feet on their axis and relieves joint pressure.

FOUR BENEFITS IN A SINGLE SYSTEM

1

Absorption

The energy produced by the impact between the foot and the impact surface is absorbed: the system reacts dynamically and reduces shock sensation.

2

Dissipation

i-daptive® technology reduces the stress on your feet and body by dissipating the energy created with each step regardless of the power of the impact.

3

Return

The system maximises the 'energy return' which improves your performance, comfort and physical well-being.

4

Stability

As your sole is kept firmly on its axis, your feet are stabilised whether inward rolling (pronation) or outward rolling (supination) providing relief from joint pressure both on your feet and your overall body.
